

Aim: Write a python/Java program to implement simple Chatbot.

Program:

```
print("Welcome To ChatBot")
print("Developed By Dharmay Sureja")
print("Feel Free To ask questions Like below")
print("How are You")
print("Do You like AI")
print("What is your name")
print("Are you on Social Media")
print("How do you work?")
print("Exit")
while True:
    question=input("Enter One questions from List Above : ")
    question=question.lower()
    if question in ['how are you']:
        print("I am absolutely fine")
    elif question in ['do you like ai']:
        print("Obviously! Who doesn't Love AI?")
    elif question in ['what is your name']:
        print("My Name is ChatBot but you can call me Chatty")
    elif question in ['are you on social media']:
        print("No I prefert to stay away from that things")
    elif question in ['how do you work']:
        print("I am backed with IF.. Else.. Statements ")
    elif question in ['exit']:
        print("Stay Home Stay SAFE!! ")
        break
    else:
        print("I think i don't Understand That")
```

Output:

```
F:\Engineering\SEM #7\AI>python prac1.py
Welcome To ChatBot
Developed By Dharmay Sureja
Feel Free To ask questions Like below
How are You
Do You like AI
What is your name
Are you on Social Media
How do you work?
Exit
Enter One questions from List Above : How are you
I am absolutly fine
Enter One questions from List Above : do you like ai
Obviously! Who doesn't Love AI?
Enter One questions from List Above : what is your name
My Name is ChatBot but you can call me Chatty
Enter One questions from List Above : are you on social media
No I prefert to stay away from that things
Enter One questions from List Above : how do you work
I am backed with IF.. Else.. Statements
Enter One questions from List Above : exit
Stay Home Stay SAFE!!
```
