### **Code : Ledblink.py**

```
import RPi.GPIO as GPIO
# Import Raspberry Pi GPIO library
from time import sleep
# Import the sleep function from the time module
GPIO.setwarnings(False) # Ignore warning for now
GPIO.setmode(GPIO.BOARD) # Use physical pin numbering
GPIO.setup(8, GPIO.OUT, initial=GPIO.LOW)
# Set pin 8 to be an output pin and set initial
# value to low (off)
while True: # Run forever
    GPIO.output(8, GPIO.HIGH) # Turn on
    sleep(1) # Sleep for 1 second
    GPIO.output(8, GPIO.LOW) # Turn off
    sleep(1) # Sleep for 1 second
```

### Creating An SSH Connection With The Raspberry PI

1. Install TeraTerm
2. Click File --> New connection,
3. Select TCI/IP Connection
4. Then type in your Raspberry Pi's IP

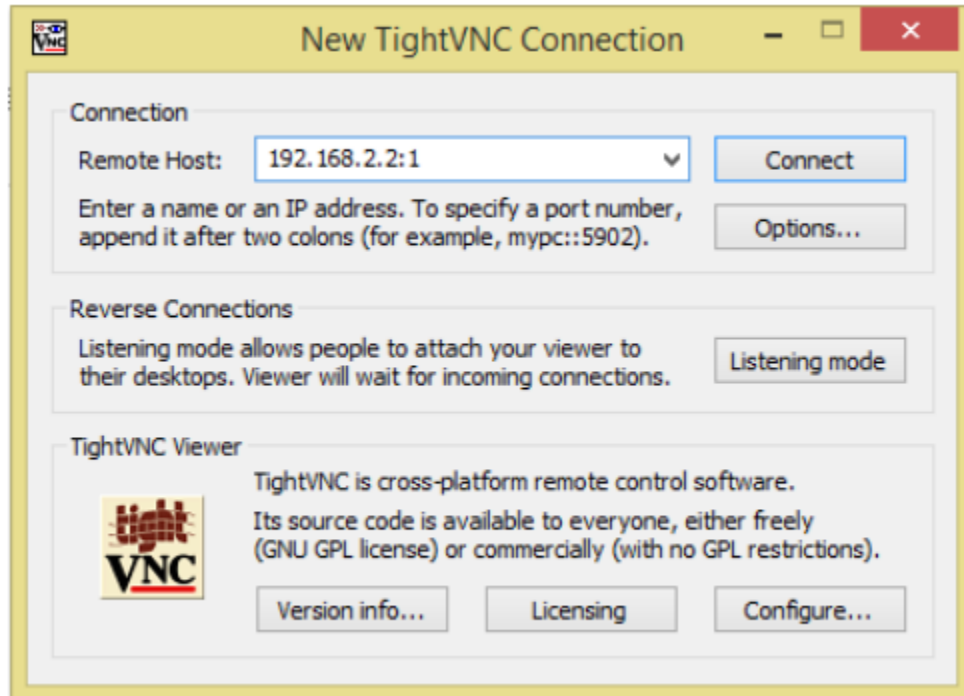

5. Click OK with the default settings
6. Click Continue for the Security Key Question
7. Enter the Username as pi

8. Enter the Password as raspberry 9. Click OK to login in to the Raspberry Pi SHELL

### Creating An SSH Connection With The Raspberry PI

1. Install TightVNC viewer in your system

2. Open your TightVNC Viewer
3. Type in the IP of your raspberry Pi followed by the Display Number
4. The default display Number is 1
5. Click Connect with the Default settings
6. When asked for password enter the default password “password”
7. It would open a VNC connection with the raspberry Pi
